

Product Range

More system for your applications

The demands on our products are increasing in complexity and sophistication. Flexibility, profitability and advisory skills are in greater demand than ever before. Murrplastik makes plastic into technology, manufacturing products covering all the aspects of cabling required in mechanical and plant engineering. Behind the scenes at Murrplastik there is a proficient team using plastic to develop, produce and distribute over 5,000 technical products and systems for your applications.

Our product range covers the following areas:

- EDK cable drag chain systems
- ACS labelling systems
- SUV conduit and screw fitting systems
- KDH cable entry and cable holding systems

Murrplastik is a one-stop-shop for all your requirements, saving you time and money by supplying perfectly compatible products. We supply our customers all over the world, taking pleasure in being innovative, supplying high product quality, delivering great benefits for the user and intelligent system solutions.

EFK Cable Drag Chain Systems

Murrplastik's glass-fibre reinforced plastic drag chains are used wherever cables and conduits of different sizes and types need to be guided flexibly and linearly. This might include robots, crane systems, plant and materials handling technology, automotive engineering etc. What makes Murrplastik's cable drag chains stand out is that they are optimally tailored to an extremely wide range of applications. Our application engineers can put together a customised package for your own specific requirements from the comprehensive and growing product line.

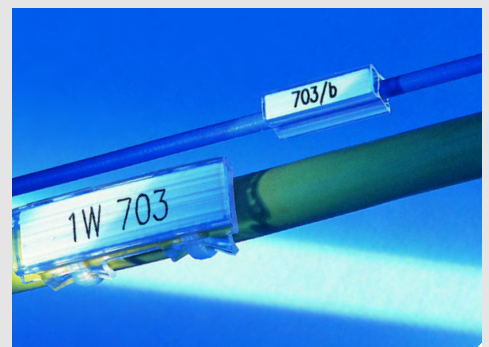

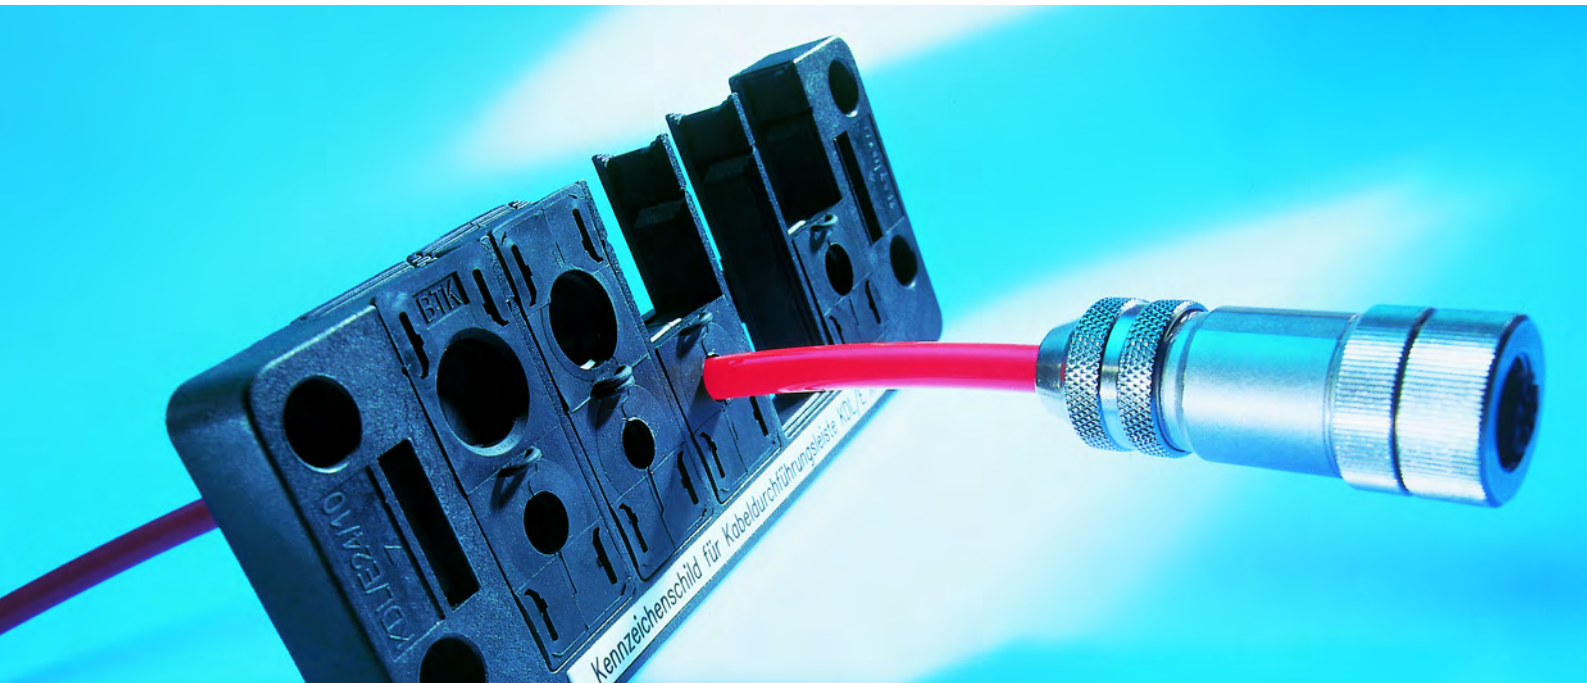

ACS Labelling Systems

Murrplastik is the world's leading manufacturer of manual and computer-controlled labelling. Our labelling software will help you produce individual labels with the aid of plotters, engraving machines, printers and laser machines. All labelling systems are characterised by high quality, durability and versatility - allowing you to produce labels at any time afterwards as well. We offer labelling as a special service. The tests, carried out in our own test facilities, are your guarantee of suitability for heavy-duty use. We have been developing and marketing software and hardware around the world for many years already. Typical fields of use include production systems in the automotive industry and railway engineering.

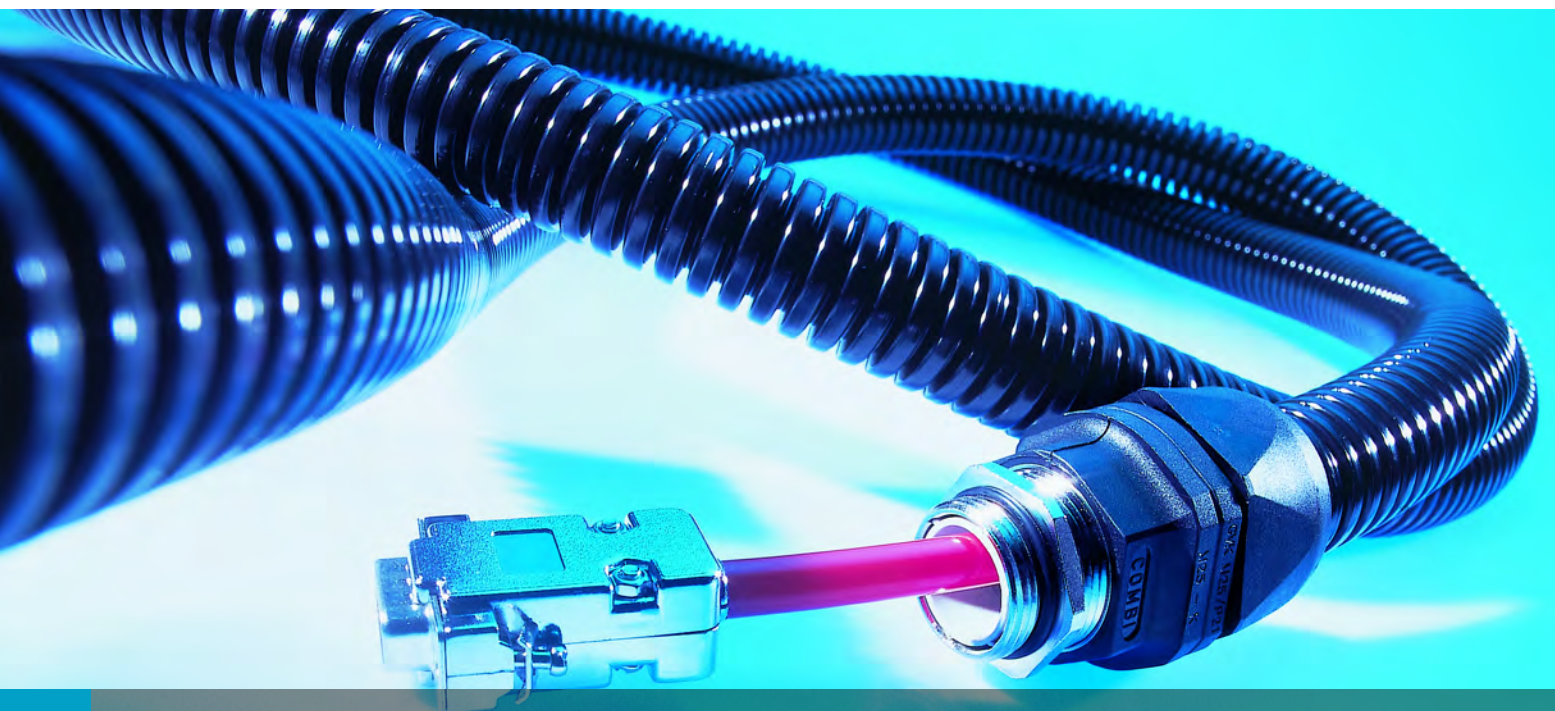

KDH Cable Entry and Cable Holding Systems

Anyone working with switch cabinets or housings will be familiar with the problems associated with introducing pre-assembled cables. That's why Murrplastik has developed divisible systems. These enable cables with plugs to be introduced easily into the housing even afterwards. The systems ensure that cables and conduits are led through optimally even when the packing density is enormous. The cable entry systems deliver exceptional process reliability. There is also a very practical and streamlined solution for electric and pneumatic cables - the cable entry panel system. The large number of product variants will help you find the best solution for your requirements.

SUV Cable Protection Conduit and Fitting Systems

Health and safety are the number one priority when it comes to cable drag chains. Cable protection conduits and fittings keep external influences such as oil, dirt, water and chips safely away from cables. Murrplastik boasts many years of experience in this area, and the product range now includes over 900 screwed fittings and 200 different conduits, all made from plastic. We always focus on the benefits for the user and the systematic approach. Our product range offers an absolutely compatible selection of various screwed fittings, distributors and holders for every conduit size. All SUV systems can be assembled immediately without any additional parts, which shows just how easy and convenient they are to use.
